

CLIENT HANDOFF

Website & Operations System

Project completion summary • Built for Lone Wolf Dumpsters • August 2026

What was delivered: A complete customer-facing website plus an owner-operated Admin Studio for lead intake, quoting, invoicing, receipts, content updates, and advertising performance tracking.

1. Customer-Facing Website

- Responsive custom website for mobile, tablet, laptop, desktop, and large desktop.
- Dedicated pages for dumpster rentals, size-specific rentals, residential, commercial, contractor, junk removal, service areas, About, FAQs, Guides, and Contact.
- Configurable pricing, rental information, capacity language, policies, service areas, and customer-facing business content.
- Quote/contact forms capturing customer details, service needs, timing, project information, and available traffic-source attribution.
- Call, text, and quote conversion paths throughout the site.
- Branded Lone Wolf visual system with real business imagery and responsive navigation.

2. Owner & Site Management Studio

- Dedicated /admin management experience separated from the public website.
- Lead / dispatch inbox with Active and Archived views, search, status filters, Refresh Inbox, Archive, Restore, and Delete.
- Lead statuses for New, Contacted, Quoted, Booked, Completed, and Lost / Not Moving Forward.
- Compact Document History so a customer with many documents does not expand the lead row.
- Editable controls for pricing/capacity, homepage copy, About, images, dumpster detail pages, project cards, FAQs, and Guides.

3. Quote, Invoice & Receipt System

- Create a Quote / Estimate, Invoice, or Receipt from any lead or as a standalone manual document.
- Lead/customer information pre-fills where available; all document fields remain editable.
- Editable line items, quantities, rates, adjustments, dates, terms, notes, and payment information.
- Separate Edit and Preview modes with branded customer-facing document views.
- Persistent save/reopen history, Quote-to-Invoice conversion, partial/full payments, and paid receipts.
- PDF download occurs only on explicit Download PDF; document email is sent through the configured server-side email system.
- Draft discard and confirmed saved-document deletion are included.

4. Lead Attribution & Marketing Performance

- First-touch and last-touch acquisition data captured where available from website visits.
- UTM parameters, click IDs, landing pages, and referrers can be attached to submitted leads.
- Normalized source categories including paid, organic, referral, direct, repeat customer, and unknown.
- Marketing Performance dashboard for campaign spend, leads, bookings, conversion rate, cost per lead, customer acquisition cost, attributed collected revenue, and revenue ROAS.
- Manual campaign and dated ad-spend entry, with architecture prepared for future platform integrations.
- Lost-reason, repeat-customer, and attribution-coverage handling to improve reporting quality.

5. Production & Data Architecture

- Next.js application deployed on Vercel.
- Persistent site content, leads, documents, and marketing records stored server-side.
- Lead data is persisted before notification attempts so a notification failure does not erase the inquiry.
- Admin mutation endpoints require authorization.
- Admin-controlled content can be updated without returning to legacy WordPress hosting.
- Architecture supports ongoing maintenance and post-launch fixes without rebuilding the site.

6. Responsive & Functional QA Coverage

- Public website and Admin Studio tested across representative mobile, tablet, laptop, desktop, and large-desktop widths.
- Lead actions regression-tested for refresh, status persistence, archive, restore, and deletion.
- Document workflows tested for direct creation, lead prefill, save/reopen, preview, PDF, email, payment, receipt, and history behavior.
- Marketing formulas tested with controlled values for CPL, CAC, conversion rate, and collected-revenue ROAS.
- Production QA/test records were separately identified for cleanup rather than mixed with real customers.
- Cross-browser checks were included in the final acceptance process.

7. What Wayne Can Manage

Owner Can Manage	Where / How
Leads & customer status	Admin Studio → Leads
Quotes / invoices / receipts	Lead → Create Document, or + New Document
Pricing / rental / capacity rules	Admin Studio → Pricing & Capacity
Homepage / About / FAQs / Guides	Corresponding Admin Studio tabs
Images	Admin Studio → Image Manager
Campaigns / ad spend / ROI	Admin Studio → Marketing Performance
Archived customers & documents	Archived Leads / Document History

8. Handoff & Launch Notes

- Connect lonewolfdumpsters.com and www.lonewolfdumpsters.com to the Vercel production project before public cutover.
- Change only the web-hosting DNS records required by Vercel. Do not remove existing MX/TXT email records.
- Rotate the Admin password used during development before long-term owner use.
- Keeping the site on the current Vercel account initially is the simplest way to handle launch fixes. The project can be transferred to the owner's Vercel account whenever requested.
- After DNS cutover, perform a final incognito check of the public domain, quote form, and Admin login.
